

Shopping Carts																	
Terrible	Bad	Ok	Good	Great													
Not always organized	Wheels get Clogged	Plastic ones feel breakable	Efficient	DRIFT!													
Wheels Break	Sometimes too small	Takes quarters for security															
Vibrations can break items																	
Discussion:																	
1: The first of the 3 issues we decided is a lack of space or perhaps too much space. Sometimes we buy more or less than we are expecting, so being able to extend and reduce the size of a shopping cart can lead customers to find the right amount of items they need with satisfaction.																	
2: Second, we decided on items that break like glass drinks or fragile items like eggs. We invented a system of shocks that is able to withstand any rough terrain, like Walmart parking lots in Rochester, so you can cruise over small potholes and other marks while keeping your eggs safe.																	
3: Third, we invented a cleaning brush with blades that cycle around the wheels, keeping them from getting stuck, so you can drive them without hair or dust from clogging up your wheels and preventing you from collecting your groceries with ease.
